

# A revolution for clients. A revolution for business. SIGNATURIX Monolit IT biometric signature

A handwritten signature is a widespread and commonly accepted way of authorising business transactions.

Hundreds to thousands of binders filled with tens of thousands of printed pages that need to be archived. Costs, costs, costs... The list is seemingly endless. Maybe it is time to take a step into the modern era and show it to your clients and business partners? The SIGNATURIX Monolit IT biometric signature. Using the SIGNATURIX Monolit IT biometric signature brings business benefits, boosts your image and protects the environment.

## Innovative technology

SIGNATURIX is a unique, original solution developed by a team of engineers, programmers, UX developers and lawyers at Poland-based Monolit IT in Gdynia. A client's handwritten signature placed on a document with the use of a dedicated tablet makes it possible to accurately recreate it in electronic form with the document in the system. The tablet registers the dynamic and static parameters of handwritten signatures. Each signature contains the biometric data of the person signing the document. SIGNATURIX saves such information as speed of writing and pressure. This allows to bind inseparably a biometric signature with a corresponding electronic document. By implementing the system, it is possible to prevent potential human errors resulting from non-completion of formalities (e.g. no signature on one of the pages of a contract). A centrally controlled process makes it easier to introduce quick changes to the process itself or the documentation.

## Security

Signatures made with the SIGNATURIX system contain a certified timestamp of the moment they are made. Biometric data unique to each person are stored in the document in an encrypted form that can be read in case the authenticity of a signature needs to be verified.

The use of biometric data collected from a handwritten signature, as well as the encryption mechanisms implemented in the software itself, significantly increase the security of signing documents in comparison with a traditional, paper-based process.

## Savings

Have you ever analysed the costs of paper, toner, printers and their maintenance, document storage and external archiving at your company? Have you evaluated the costs generated by employees scanning and processing paper documents? The amounts are enormous each year! Thanks to the innovative SIGNATURIX solution, these costs can disappear from your accounting spreadsheets. It is no longer necessary to sign on paper all documents that appear in the client - company relationship. They can be signed electronically in a secure way. Sounds tempting, doesn't it?

## Quick service

Do you know how much time it takes to serve a client at the customer service desk? How much of it is wasted on generating and printing paper copies of documents, checking them, counting pages, stapling them together? Clients do not have time or desire to wait. For them, each 5 minutes of waiting in a line is a major inconvenience.

With the SIGNATURIX biometric signature, the client service process can be significantly shortened, thereby increasing client satisfaction. Could you dream of anything else?

## Environmental protection

A socially responsible company cares about the environment – it is our common duty. Using the SIGNATURIX electronic signature significantly decreases the company's negative impact on the environment. We are not just talking about eco-friendliness. The companies that implement the SIGNATURIX biometric signature are at the forefront of environmental standards in business.

## A modern image

Everyone wants to be innovative, but few companies can boast the use of truly modern, innovative solutions in their day-to-day work. The SIGNATURIX biometric signature is a cutting-edge, user-friendly innovation that makes business easier and helps build good client relationships (e.g. through mobile work stations or faster customer service).

## Media will talk about it

Media love new technologies. By implementing SIGNATURIX, you get a powerful public relations tool that can help you get widespread coverage and millions in AVE. These are the arguments that no experienced marketer can ignore.
